This is particularly successful using data-driven solutions.

For our team, we are looking for a full-time or part-time position as soon as possible for a

Backend Developer (m/w/d)

We are looking for a full-time or part-time Backend Developer (m/f/d) for our Development team. You will work in an agile team in close cooperation with experts from science and practice to develop solutions for decision support and process automation. The systems are complex and process large amounts of data. You will ensure high performance and availability of the Kubernetes clusters and develop optimal deployments and infrastructure automation. You will stay close to the customer and roll out your projects independently in short cycles in our Docker environment.

We offer

- software development with modern tools and frameworks in a motivated, friendly and helpful team, friendly and helpful team
- an open approach to new methods, frameworks and programming languages
- Datalakes with millions of objects
- an agile working environment with short release cycles thanks to Docker, Kubernetes and CICD Tools in a varied productive environment
- interesting, varied activities with flexible working models and working in a growing, owner-managed company a growing, owner-managed company
- a modern workplace in the Bremen Technology Park - a top address for high-tech and research in northern Germany
- good transport links and our own car park, soon with charging facilities for electric cars
- mobile working from home or elsewhere
- An open and cooperative corporate culture with flat hierarchies
- Active involvement in shaping processes and training opportunities
- Health management: e.g. drinks, fresh fruit, massages, fitness programmes
- Company pension scheme

Your profile

- You have a degree in computer science, mathematics or a comparable field
- You have experience in frontend and backend development
- You are familiar with microservices and ideally know how to package them in Docker and orchestrate them in Kubernetes.
- You also have very good knowledge of at least one high-level programming language such as Java and are not afraid to learn others.
- You enjoy working in a team in an agile process with contact to science and practice.
- You enjoy your work and like to master complexity.
